Operating Systems:- Windows, Ubuntu & Mac OS.

# Projects

---

## PDVSA Cost Estimation Tool

---

**The Cost Estimation tool is an online web application to conduct capital class 4 estimates for oil and gas refineries.**

The tool uses a standard set up and relevant industry data, described under estimation methodology, which allows the user to create a cost estimate within the class 4 accuracy in a very short period of time. All it requires is to enter some key specifications, such as the capacity and the region the plant will be built in.

## ESOKO

---

**Esoko is a simple but powerful communication tool for business, government, NGOs and others to connect with farmers.**

**The major features include:-**

- ✓ Sending messages and mails to farmers and agents about the weather and the prices of the newly uploaded commodities and more.
- ✓ The agents will be able to create their own network and add people to whom they want to send the notifications and messages.
- ✓ Members can also send SMS or Voice messages from browser or from the android app.
- ✓ The users will also get to see the reports of each module and they can also mail the report as the excel file.

## Sort Code Migration

---

**Sort Code Migration is an internal application for Barclays bank, which mainly concentrated on moving the corporate customers to the newly divided Barclays Corp Bank.**

Since the U.K government ordered that the government will not be responsible for the bankrupt by their corporate customers, the bank wanted to divide in to two and manage these customers separately. To achieve that they planned to conduct campaigns where customers can come in and submit the respective documents and get new Sort code. The SCM application is the path which they planned to go through the stages and completing the migration of 65000 corporate customers to Barclays Corp bank.

## Interests

---

**Blogging, Travelling & Reading.**
